

Lacing Anchors

Lacing Anchors are used in the fabrication of insulation blankets or removable covers/pads. The nail is pressed through the insulation material, so the hook portion sits on the top edge and the nail is secured on the opposite side of the insulation with a washer. The two sides of the blanket can then be "laced" together by the hooks with tie wire.

Material:

Mild Steel (zinc plated)

Stainless Steel

Available with 3/8" Dia top plate as Special Order

14 and 12 Ga available.
