

Dome Caps

Domed caps are designed to be used where appearance and safety are factors when installing insulation, or fabricating blankets or pads. The caps are used to cover the nail point on weld pins, hangers, lacing anchors & quilt pins.

Plain Aluminum, Black Aluminum, White Aluminum and SST

Other colors available as special order.

All caps have a STAINLESS STEEL insert.

Application:

Domed caps are designed to be used where appearance and safety are major concerns. For best results, pins should be $\frac{1}{4}$ in. longer than the insulation thickness.

Secure insulation with a self-locking washer, then install the dome cap to cover the nail point.
